## **Polytron, Inc. Doubles Office Space to Meet the Growing Manufacturing Market**

**DULUTH, GA — November 20, 2013** — Polytron, Inc., a leading engineering consultancy and systems integration firm based in Duluth, Georgia has doubled its 3300 Breckinridge Boulevard office space in Gwinnett County — where the company has thrived for 30 years. “The manufacturing industry is expanding and growing and Polytron is growing to meet the demand,” says founder and president, Charlie Jager, P.E.

Many new and long-time Fortune 500 clients engage Polytron to expand and update their manufacturing operations to respond quickly to the everchanging consumer and market demands, increase efficiency using new automation innovations and improve safety compliance. “We expect to see this growth continue,” says Brent Stromwall, Vice President of Business Development, “and we are well positioned to respond to the manufacturing renaissance in the South and anywhere our clients need us to be.”

Over the 30 years of bringing engineering excellence to clients, Polytron has seen a shift in focus from just automation and controls, to a more holistic approach to integrated technology across the entire plant. More and more, our clients are asking that we ensure that their systems “talk” to each other and provide data visibility at their fingertips using customized visualization and reporting at the line, plant and enterprise level to enable faster and better decisions and changes in response to market shifts.

Our clients are also focusing on the training of their workforce for overall improvements in plant efficiency. With some of their most knowledgeable employees retiring and the skill gap of the new workforce, our training programs help our clients improve the people component of efficiency. By sharing standard operating procedures and best practices across plant operations through our proven manufacturing training programs, clients rely on us to help them put performance in the hands of their people.

And, with OSHA’s increasing regulations and the manufacturer’s growing attitude that, “employee safety is just the right thing to do,” machine safety has become a key component to everything we do. From machine guarding and upgrading of legacy equipment to the required training for the new Global Communication Standard (HCS) of the Globally Harmonized System (GHS), Polytron helps our clients mitigate risks by reducing hazards.

Earlier this year, Polytron earned the CSIA CERTIFICATION, demonstrating Polytron's longtime commitment to the highest standards while delivering business solutions to its clients in manufacturing.

###

Polytron, Inc., a CSIA CERTIFIED leader in engineering consulting and systems integration based in Duluth, Georgia, provides Manufacturing Intelligence, Power and Automation Process, Systems and Controls, Machine Safety, and Technology Transfer and Training services focused tightly on manufacturing systems for the Food, Beverage, Consumer Products, Life Sciences, Automotive, Energy and other major industries. Founded in 1983, Polytron has established a reputation as a leader in the field of Automation, Information Systems, Design and Controls and has an impressive customer list composed largely of Fortune 500 companies. Polytron's portfolio includes manufacturing intelligence solutions, sophisticated and powerful modeling and emulation capability, a robust training offering, and design and consulting services for high-efficiency manufacturing solutions.
