

Continuous Improvement

performance enhancement for *your resources* through incremental improvement and point-of-need, ILT workshops, and web-based reference material.

WORKSHOPS

SAFETY

Job Hazard Analysis (JHA)

Your team will learn about job safety awareness and how to conduct a job safety assessment using the Polytron JHA Form (or using client form). In 4-hours, students will walk through an assessment which includes conducting observations to identify limitations associated with tasks performed, followed by hazard identification and evaluation based on the level of risk for each hazard. (.4 CEU credits)

GHS Level 1: Classification and Labeling of Chemicals

This is the first of two workshops designed to prepare your company and employees for the Globally Harmonized System (GHS) classification and labeling of chemicals. This 2-hour workshop meets OSHA's training requirement of communicating updates in chemical labeling and safety data sheets to plant personnel. Employees will quickly recognize and interpret the information on labels and safety data sheets to respond appropriately and safely to chemical hazards in their work environment. (.2 CEU credits)

GHS Level 2: Making the Transition to GHS

This is the second of two workshops designed to prepare your company and employees to meet OSHA's requirements for GHS. This 4-hour workshop communicates the new requirements for GHS, provides guidance for creating a transition plan, and supplies chemical tracking and training templates to help you transition to GHS to meet OSHA's timeline for compliance. (.4 CEU credits).

Students walk away with templates for tracking chemical update requirements.

"The Wonderful Halos plant has been considered one of the best in class within our sister companies due to the focus we have on developing our workforce and continuously improve. The team (both hourly and salary) has demonstrated great adherence to what we were taught during Polytron (Job Aid Development, ICP, and M.E.N.T.O.R) Workshops, keeping our training materials up to date, increasing training efficiency due to the development of subject matter experts and documentation of best practices and one point lessons shared across the plan. I truly recommend Polytron's expertise to make this happen."

Sr. Production Manager, Wonderful Halos

SERVICES

Computer-Based Learning Objects

A Learning Object is a standalone instructional component that can be used in a variety of ways to support learning and job performance. Typically delivered electronically, these media-rich building blocks often provide unique benefits over their more traditional counterparts. Using modularized learning objects in your training environment makes it possible to schedule training more flexibly and provide opportunities for independent learning.

Changeover Coordination & Validation

Changeover Coordination and Validation helps ensure the changeover process is completed efficiently so that materials, and resources - both human and physical - are utilized to their maximum potential. This service identifies key components of the changeover process by applying a standardized methodology to complex concepts and functions, by breaking them down into manageable components. A Polytron resource is placed onsite to manage the coordination efforts.

DOWNLOAD GUIDE

Surviving FAT (A How-to Guide)

This guide is a must for anyone assigned to participate in a Factory Acceptance Test (FAT). Surviving FAT places the attendee in the driver's seat for success by walking through a how-to guide that covers the must-do's before, during and after FAT: including a check list, questions to ask, and methods of capturing technical information for operational support.

[Download FAT Survival Guide.](#)

With the interactive "Computer-Based Just-in-Time training" provided by your company and rolled out across multiple locations, I was told by some of our plants that they learned more from "Polytron interactive training" than they learned from all the other trainings combined (including one given by me)...
